

Our new Q10 Power "Special Edition" within 25 ml.

For the energy surge within an hour Q10 Power „Special Edition is a new and innovative symbiosis between the next generation of energy-drinks und micronutrients. The energy-drink of a new spirit of time – your partner, individual, healthy, self-confident, prone for success, liberated, open-minded, natural und exceptionally good – simply a premium product. The combination of micronutrients of the next generation ---now together with Q10 + NADH (Q1) + evening primrose oil+ vitamin D3 + vitamin E & Vitamin B12 formulation as a drinking solution for immediate consumption

What is NADH? NADH is the reduced form of Nicotinic acid-Adenine-Dinucleotide (NAD⁺), with a hydride Ion attached to it. It therefore is being able to react in a number of energy conserving processes within the cell, especially within mitochondria. By using the reduced form it is an electron-transmitting co-enzyme, which takes part in a number of redox reactions within the metabolic pathway of nerve cells. In contrast to its oxidized form (NAD⁺) is pharmacologically active. The extending feature of this new energy drink is its unique combination of the important life conserving coenzyme Q10, combined with an essential part in the energy production of the mitochondrial transport chain, the NADH (also termed as Q1), evening primrose oil, vitamin E, and vitamin B12 the latter being a highly essential feature within the energy production chain, which at the same time also acts as a potent nitric oxide radical scavenger.

NADH plays an active role in improving mobility, cognitive functions and memory. NADH does this by stimulating the production of brain neurotransmitters, and correcting some brain chemical imbalances. NADH stimulates the production of the neurotransmitters: serotonin, dopamine, and noradrenaline or norepinephrine. In addition to its primary role of producing energy, NADH triggers many vital chemical

reactions inside the cell. According to clinical research, it has been demonstrated that NADH:

1. Acts as the driving force behind increasing energy production and all the benefits that enhanced energy brings. Increasing energy while reducing fatigue.
2. Plays a key role in cell regulation with positive physical effects on blood pressure, cholesterol levels, sugar metabolism, heart rate and more.
3. Plays a key role in DNA repair
4. Plays a key role in the repairs to worn out, wounded or damaged cells.
5. Stimulates & increases the capacity of the immune system to produce antibodies and fight foreign invaders & disease.
6. It's the most potent biological antioxidant. Antioxidants in the body, such as beta-carotene (a vitamin A precursor) vitamins C and D, and selenium -- prevent cell damage, and prevent a variety of diseases, like cancer.
7. It increases the synthesis of certain neurotransmitters in the brain providing a positive physical effect on moods, memory retention, and learning.
8. It increases the synthesis of other neurotransmitters known to be effective in beating chemical based: alcohol and drug addictions.

It increases the synthesis of neurotransmitters in the brain known to be effective in correcting specific chemical imbalances. Some of these chemical imbalances are the physical causes of mental illness, anxiety, aggression, depression, despair and hopelessness. Thanks to the use of NADH (Q1) in der Q10 in the Power "Special Edition" you now have an energy supply with a long-term effect
NADH (Q1) provides the energy necessary for sufficient cerebral function, resulting in an improved concentration and

efficiency as well as long term standby of vigilance when immediate focused attention is demanded.

**As a special bonus for all you nutrition-conscious people:
All ingredients are of natural origin !**

Q10 Power Special Edition contains:

- NADH or Q1
- Coenzyme Q10
- Evening primrose oil
- Scientifically tested with proven bioavailability
- Finally a micronutrient, which in evidence-based studies has demonstrated its efficacy especially in fatigue syndrome, in Parkinson and even in Alzheimer patients

Q10 Power "Special Edition" is the perfect mix of natural und endogenous substances, which gives you the extra kick, when performance is required, such as stressful situations or when you have to work overnight. Lastly, the mood benefits from this action as a refreshing all senses follows any feeling of being worn-out. Therefore, Q10 Power „Special Edition“ is the all around power energy drink, which aside from its concentrated Q10-NADH- power in a handy 25 ml vial, gives you the taste of fresh lime, a tasty side effect. Q10 Power „Special Edition“ can be considered the perfect companion, always ready on call, may it be during longtime and tiring driving, in school, to optimize performance during your professional chores, at the sports field or even when being at a party.

Q10 Power „Special Edition“ gives you back the power of nature !

Q10 Power makes you fit and awake, faster in thinking, and better in performance !

Which at first sight sounded like an unbelievable promise, has finally become true, scientifically proven and is undeniable. With the aid of the magic molecule NADH (Q1) it is now possible to keep up power requirements over a period of 8 hours as a quasi stand-by, and reactivate energy sources within 1/2 hour. With this in mind either physical as well as mental performance can be reactivated and maintained-and all this without being a doping agent ! According to present scientific belief, this co-enzyme is one of the potent anti-aging remedies science has come across. Not without reason, nature uses NADH as the first step in the metabolic pathway before the full spectrum of energy extraction within mitochondria is initiated. Thus, NADH is the material through which all other nutrients in the metabolic cycle can fully unfold their effective range NADH – the wonderful co-enzyme Q1 with the hard to pronounce name Nicotinamide-Adenine-Dinucleotide-Hydrogen is found in every cell and it is accepted by scientists, that in case of a deficiency of NADH it may very well be a cause for the formation of a number of neurodegenerative diseases. And since neuronal cells are in need of NADH to produce energy, the aging brain is deprived of this essential substrate, resulting in mental decline. But aside from its capability to produce energy within the mitochondria of cells, it also serves as a stimulator in the production of the so-called happy hormones, dopamine and epinephrine, both of which are significantly reduced in patients with a degenerative disease of the central nervous system.
